

ABSTRACT OF THE DISCLOSURE

5 A watch for displaying time in hours and hundredths of an hour. The watch includes a housing assembly being designed for being worn by the user. A timing assembly is positioned in the housing assembly and operationally coupled to a power supply. The power supply supplies power the timing assembly. The timing
10 assembly is designed for providing a pulse every second when the power supply supplies power to the timing assembly. A processing assembly is positioned in the housing assembly. The processing assembly is operationally coupled to the power supply for supplying power to the processing assembly. The processing assembly is
15 operationally coupled to the timing assembly to receive the pulse from the timing assembly and process the pulse into a time to be displayed on a display member operationally coupled to the processing assembly. The processing member displays minutes calculated by the processing assembly in hundredths of an hour.
